Presenter Index.....	185

New This Year!

Those of you familiar with the SIOP Conference printed program will notice some changes in this edition. First, the numbering of the sessions has changed. Instead of poster sessions listed under one number in a block, each session now has its own session number. This will make the presentation easier to find for presenters and attendees alike. Second, you will notice several images included with the session descriptions. All are welcome to attend these presentations, which are included with your registration.

 sessions prepared by the SIOP Executive Board or Conference Committee

HR: HR Practitioner Track

MultiDisciplinary: multidisciplinary sessions

 reproducible resource presentations

Third, we have also moved the list of reviewers out of the program and on to the web so the list is visible to the public, not just those who receive a printed program. Fourth, we have removed the black and white schedule grids, which over the years have become harder to use due to the addition of more special sessions, and replaced them with color-coded online versions. These versions will be available in hard copy at the event in the program summary. Also removed is the continuing education credit information. This information is updated frequently, so it has been decided that the web is the best place for it to reside. The goal of these changes is to make the printed program as user friendly as possible. Thank you and enjoy the 33rd Annual SIOP Conference!

OFFICE OF THE MAYOR
CITY OF CHICAGO

RAHM EMANUEL
MAYOR

April 19, 2018

Dear Friends:

As Mayor, and on behalf of the City of Chicago, I am pleased to welcome all those attending the 33rd Annual Society for Industrial and Organizational Psychology (SIOP) Conference.

Since its founding, SIOP has become the premier organization for those practicing industrial-organizational (I-O) psychology. SIOP has worked to advance I-O psychology through research that improves the well-being and performance of people in the workforce. Through workforce planning, employee selection, leader development, the study of job attitude and motivation, and facilitating organizational changes, SIOP is working to continue the advancement of science and the practice of the psychology of work.

This year's event brings over 5,000 industrial-organizational psychologists and students, along with representatives from consulting firms, publishers, and other related industries together to discuss, network, and learn. With a selection of workshops, exhibitions, receptions, and networking events, attendees will have the opportunity to learn new ways to advance the science of work, develop smarter and innovative evidence-based HR, organizational tools, and solutions. I commend SIOP for continuing their work in the science and practice of the psychology of work.

It is my hope that after learning about and discussing what's new and changing, you will take the time to explore and take advantage of everything Chicago has to offer. An exciting variety of restaurants, universities and world-class museums accented by our iconic skyline, incredible lakefront, and historic neighborhoods make Chicago one of the world's greatest cities.

I hope you have an enjoyable and productive conference, and submit my best wishes for much-continued success.

Sincerely,

A handwritten signature in dark ink, reading "Rahm Emanuel". The signature is fluid and cursive, with the first name "Rahm" and last name "Emanuel" clearly distinguishable.

Mayor

Dear Colleagues,

Welcome to the 33rd Annual SIOP Conference in Chicago! This year's conference introduces several innovations designed to elevate your experience and tailor the conference to your needs. The heart of the conference continues to be the array of peer-reviewed sessions. The conference is packed with symposia, roundtables, panels, debates, master tutorials, and posters. There are many alternative sessions, which means more novel formats and creative ways to engage attendees. The top rated posters will be showcased at the Thursday evening Networking Reception, *presented by SHL*. An HR Practitioner Track is set for Friday in Sheraton 3 for those with specific interests in the practice of HR. We would like to call your attention to some new and noteworthy features of this year's conference.

Opening Plenary Session

The conference kicks off on Thursday morning with SIOP's highest awards and introductions to the newest SIOP Fellows. This event will feature Fred Oswald's Presidential Address with a review of the goals for TeamSIOP, following a must-see introduction by incoming president, Talya Bauer.

SIOP Select

This new concept highlights sessions cultivated by SIOP volunteers and committees on high-demand, high-impact topics that are broadly applicable across the membership. What was previously a series of special, featured, Theme Track, Executive Board, and Alliance sessions are now united as SIOP Select! It includes a presidential theme track held on Thursday in Sheraton 5 entitled "TeamSIOP Ventures Into New Playing Fields." Also included are several special sessions featuring a live Twitter debate, a machine learning competition and instruction, an innovation showcase, and a presentation and discussion on sexual harassment in the workplace. SIOP Select also includes several sessions that pair 2017 award winners who will offer strategies, tips, and examples of leading careers in I-O. Finally, sessions focused on the business of SIOP and a series of Alliance sessions with international perspectives also comprise SIOP Select.

Methods Mania

In response to members seeking to learn about cutting-edge topics in research methods, measurements, and statistics, Methods Mania will present the highest-rated methods tutorials and sessions in a one-stop location (Sheraton 4) throughout the program.

Reviewers' Choice

New for 2018, the Reviewers' Choice block (Friday at 1:00) will feature the highest rated sessions across a diverse array of content.

Reproducible Research and Multidisciplinary Sessions

We have 46 presentations featuring Reproducible Research and 59 with a multidisciplinary focus to complement these growing focus areas of our field. Look for the  and MultiDisciplinary to find these in the programs and find a link to the materials for the RR sessions at www.siop.org/rr.

Communities of Interest

Community of Interest sessions provide a forum for you to contribute to the discussion on a range of hot topics. Each interactive session is designed to facilitate networking and thought-provoking discussion and identify collaboration opportunities. These casual forums are held in Mayfair on Thursday and Friday and are moderated by facilitators with expertise on the topics.

Closing Address and Closing Reception

You won't want to miss the closing plenary, featuring Mark Squillante from IBM. Following the closing plenary will be a festive finale to the conference.

We sincerely hope that this year's conference is the best yet and offers the learning and networking opportunities you are seeking. Please share any feedback or ideas with the Program Committee so the conference continues to evolve each year.

Enjoy the conference!

Tired of lugging poster tubes onto the plane, in an Uber, on the train?

Try  **PosterSmith**
Experts of Printing Posters on Fabric

PosterSmith prints posters on wrinkle-resistant fabric, allowing you the convenience of folding and packing your poster as you would clothing rather than having to carry a poster tube while traveling.

SIOP poster presenters will enjoy a 15% discount on all PosterSmith orders, plus free 2 day shipping within the US! To receive this discount, simply visit <https://postersmith.com/poster>.

Your SIOP registration is your ticket to nearly 1,000 educational sessions, but it is so much MORE!

It is your all-access pass to

Plenary Sessions: Celebrate the latest award winners and new Fellows, and hear from SIOP presidents about their visions for SIOP.

Networking: In a session, at a reception, or even in the line for a cup of coffee, there are always opportunities to meet new people and maybe even your next research partner, perfect job candidate, or future employer!

Committee Zone: Find out what SIOP's many committees have planned for the upcoming year. Even better, get involved!

Exhibit Hall: Meet with vendors to find solutions for your business needs, and pick up some swag.

Continuing Education: Master Tutorials and the Theme Track help you earn the professional development credits you need.

Receptions: Get a drink and relax, or dance the night away, all the while networking with I-Os best and brightest.

Workplace Allies: Exploring the Stages in Becoming an Effective and Vocal Ally

This symposium will synthesize ally research by examining the multiple pathways to becoming an ally, the different ways by which allyship behaviors manifest, and the positive impacts that these behaviors can have within a workplace context. These studies utilize multiple sources of data (survey, interview, meta-analysis), in order to investigate all stages of the ally development process.

Extending Situational Strength Theory to Account for Situation–Outcome Match

Situational strength theory is extended by contending that strong situations strengthen, not weaken, personality–performance relationships when situational cues do not match performance domains. This occurs due to an affect-driven behavioral displacement process. Results from a 2-wave survey ($N = 372$), analyzed using dual-stage moderated mediation, support these assertions.

At the Intersection of Sex and Heterosexism: Perceptions of Same Sex Harassment

This study examined the impact of bystander heterosexism on same- and opposite-sex harassment using a 3-way moderation, determining that bystanders low in heterosexism were more apt to (a) label an incident as harassment, (b) view an incident severe, and (c) intervene when observing incidents involving male perpetrators and female victims.

The Effect of LMX and Moral Identity on Unethical Pro-Organizational Behavior

Although most unethical pro-organizational behavior (UPB) research examines organization-targeted UPB, little research has examined UPB directed at a specific member, like a supervisor. In line with social exchange theory, this study found that leader–member exchange positively predicts UPB. Though moral identity was expected to moderate the relationship, interactive effects were not significant.

Microaggressions: A Meta-Analysis

Published predictors, moderators, and outcomes of experiences of microaggressions were quantitatively examined in this meta-analysis. Results show that identification was positively associated with microaggressions. Microaggressions were associated with negative psychological well-being, physical health, and job outcomes. Type of microaggression moderated the strength of these relationships.

Meta-Analyses of Personnel Assessments for Emerging Forms of Employee Crime

Advances in digital technology have led to new forms of employee crime and organizational risk. To address these emergent threats, new forms of personnel risk assessment need to be developed. A meta-analysis of 39 studies supporting the 5 dimensions of a new assessment, the Background Survey, produced an encouraging mean $\rho = .46$.

Social Judgments of Electronic Multitasking in the Workplace

This set of 3 experimental studies explored factors influencing social judgments (i.e., rudeness, agency, communalism) of electronic multitasking behaviors of coworkers during work meetings. Both task switching behavior type (concurrent vs. sequential) and secondary task relevance (irrelevant vs. relevant) influenced judgments, as well as individual differences in polychronicity.

A Meta-Analysis of the Antecedents and Outcomes of Workplace Incivility

Relationships between incivility and antecedents and outcomes were meta-analyzed. Results showed that incivility was associated with dispositional and situational antecedents, but relationships were stronger for situational predictors. Incivility additionally had a stronger relationship with many employee outcomes in comparison to the relationships found for other forms of mistreatment.

Interpersonal Deviance to Abusive Supervision: Does Citizenship Behavior Matter?

Drawing on the stressor-emotion model of counterproductive work behavior (CWB), this study proposes that interpersonal deviance may trigger abusive supervision through accrued supervisor negative emotions. Using a moderated-mediation model, the study also explores organizational citizenship behavior (OCB) as a conditional moderator, suggesting that OCB may help predict abusive supervision.

Dark Triad Moderators of Overqualification and Discretionary Work Behaviors

This study explored the relationship between employee overqualification (perceived and objective) and discretionary behaviors (counterproductive workplace behaviors and organizational citizenship behaviors) with the dark triad (Machiavellianism, psychopathy, and narcissism) as a moderator of this relationship. Finding indicate that Machiavellianism and psychopathy were the strongest moderators.

Development and Initial Validation of the Time Management Inventory

Many popular assessments of time management lack clear theoretical grounding. Using a construct-oriented, process-based model, the authors developed and refined the Time Management Inventory (TMI). Results from 3 studies indicated an interpretable factor structure underlying reliable subscales, with the potential to predict job performance criteria, including some generalizability across cultures.

Developing a Self-Report Scale of Employability Using the RAW Model

Using the RAW (Rewarding to work with, Ability, Willingness to work hard) model of employability, the authors constructed a short self-report scale. Exploratory factor analysis and construct validation lent support to the scale and model, but predictive validity of teammates' ratings was limited.

Cognitive Complexity, Automated Assessments, and Leadership Potential

This session examined cognitive complexity as a predictor of high-potential leadership and career trajectories. Relative use of integration distinguished senior from mid-level leaders. Among senior leaders, those using relatively more integration tended to have upward trajectories, whereas those using relatively less integration were more likely to turnover and transition laterally.

Applicant Faking Detection: Investigating Subgroup Differences

Racial and gender subgroup differences on 5 faking measures were evaluated: Social Desirability, Bogus Items, Blatant Extreme Responding, Covariance Index, and Dispersion Index. Results indicated small to medium difference on mean scores of these faking measures. Adverse impact is not a concern for most groups except for Asian.

Diving Into Device: Examining Device Features, Interactive Simulations, and Reactions

This study examined devices in terms of features. Screen size and browser type were both related to performance on cognitive assessments. Differences were greatest for the most interactive simulation. Results suggest that assessments containing problem solving or interactive simulations should be completed on a large screen device with an up-to-date browser to maximize performance.

How to Build a Cognitive Ability Test With Reduced Mean Group Differences

Guided by psychometric principles, one can build cognitive ability tests with lower mean group differences by using items with low *g*-saturation and by reducing the reliability of the test. Such a diminished *g* test predicts *g*-related criteria worse than a *g*-test with high *g*-saturation and high reliability. Assertions about specific item types causing reduced mean differences are likely incorrect.

A Comparison of Multiple SJT Scoring Strategies

Although situational judgment tests (SJTs) offer many advantages compared to other assessment tools, there is little consensus regarding SJT scoring methods. This research evaluated a number of different profile scoring strategies in terms of convergence, reliability, and mean group differences. Additional research on SJT scoring is clearly needed.

A Novel Similarity to Expert Scoring Method for Situational Judgment Tests

A novel approach for scoring a situational judgement test using an expert key is described. Using a distance-based metric and accounting for both variance and covariance among expert ratings, the approach results in an intuitive and easy to interpret score (0-100 scale). The approach is demonstrated using a sample of U.S. Marine Corps instructors.

CCL's leadership development services offer unparalleled insight to benefit our client organizations. Five decades conducting original scientific research brings unique understanding and generates powerful models, establishing CCL's forefront position for effective leadership development.

Our balanced blend of academic and applied research drawn from one of the world's largest leadership development knowledge databases offers proven solutions for today's business challenges while furthering our field. Our original work on how successful executives learned valuable leadership lessons framed much of how leaders are developed today. Now we're exploring new directions for leadership research, including how leadership operates as a collective social process.

- Name your challenges and we'll create innovative solutions with metrics for your success tied to your business strategy.
- You'll benefit from research-based best practice solutions for how to stay on top of current business objectives while developing new growth opportunities.
- We'll help you build a collaborative culture that is more nimble and agile.
- Your growth path will be clearly defined, with distinct phases and measurable outcomes.
- You'll be in good company. We've worked with more than two thirds of the world's Fortune 500 companies and thousands of others.

How will you build the leadership capabilities needed for the digital, transformative era?

Disruptions of every kind are transforming our businesses. There is an upside to disruption, and prepared leaders know how to find it. Organizations with leaders prepared to pioneer in the digital-era are more ready to take advantage of disruption, outperforming those lagging in modern capabilities. EY helps accelerate modernization of leadership capabilities needed for success in the digital era.

The better the question. The better the answer.
The better the world works.

Myth Busters: Which Survey Practices Are Evidence Based?

Surveys are ubiquitous for I-O practitioners. As organizations get more complex, surveys keep leadership connected with the voice and experience of employees. Leaders depend on survey feedback and invest in these programs, yet many survey practices are not evidence based. This symposium tackles commonly held assumptions with robust, data-driven studies to identify which (if any) are supported.

Communicating With Organizational Leaders: Selling Our Intervention

The adoption of I-O interventions depends on convincing organizational leaders of their utility. Ineffective communication with leaders can prevent successful implementation of I-O interventions. In this session, attendees can discuss the latest in research and practice relevant to effectively communicating with organizational leaders, thereby leading to greater impact of I-O implementations.

140. Symposium/Forum: 1:30PM–2:50PM**Ontario****Discrete Emotions at Work: Experiencing Anger, Guilt, Compassion, and Pride**

Work situations elicit discrete emotions with distinct action tendencies. Four papers show how distressing work events (i.e., ostracism, work-family conflict, value conflict, and customer distress) evoke 4 discrete emotions (i.e., anger, guilt, compassion, and pride) and the moderating conditions that determine employee well-being and work behavior.

The New World of Performance Management: An Update on Practice and Research

No topic has been hotter in human resource departments than the persecution and evolution of performance management. This panel discussion will address what has worked, failed, and sputtered for organizations that have made serious commitments to reengineering their performance management systems. Also discussed will be what further research, changes, and tough questions need to be addressed.

Are Modern Assessments Ethical?

Technological advances in psychometric assessment have rapidly created new and sophisticated methods of collecting and analyzing personal information that can be used to create an assessment of an individual's personality. This debate will look at the many sides of how technology is enabling personality assessment and the ethics that need to be considered when developing and using these new tools.

What Gets Published? Experimentally Manipulating Implicit Expectations of Reviewers

The use of hedges (i.e. words that create vagueness) in submitted manuscripts seems to be expected by editors and reviewers of high impact

I-O journals. However, previous research cannot establish causality. This experiment provided first evidence that authors' use of hedges impacts reviewers' ($N = 96$) recommendation for publication. Results also suggest that this expectation is rather implicit.

SIOP Select: Using I-O to Combat

Community Violence (Chicago Case Study)

This case study of the Chicago Violence Reduction Strategy (VRS) will highlight ways that I-Os can ease the complexities of public-private partnerships and assist in tackling root causes of violence in their communities. This panel features a diverse selection of Chicago community leaders from law enforcement, faith-based community, small business, and neighborhood association organizations.

What Should We Do About Alpha II: Alternatives to Alpha?

Methodologists often claim that coefficient alpha is overused and misunderstood. This symposium examines alternatives to coefficient alpha, including retest reliability, omega, marginal reliability, and generalizability theory. Each presentation will describe when and how the alternative reliability estimation method will outperform alpha.

Rigor and Relevance With Necessary Condition Analysis (NCA)

Jan Dul, Erasmus University, Netherlands, **Presenter**
 NCA understands cause-effect relations as “necessary but not sufficient”. This logic differs from conventional additive logic, and provides new theoretical and practical insights. NCA puts a ceiling line on the data in XY-scatter plot, representing the level of X that is necessary but insufficient for a given level of Y. The rapidly growing interest in NCA justifies this tutorial. www.erim.nl/nca

The Role of Gender Inequality in Explaining Gender Differences in Job Satisfaction

In order to understand the influence of gender inequality on gender differences in job satisfaction (JS), the authors conducted a meta-analysis based on 264 effect sizes ($N = 341,949$). Accounting for publication bias, men have significantly higher JS ($d = -.11$). Moreover, using the Gender Inequality Index, greater national gender inequality was found to predict greater gender differences in JS.

Computationally Modeling Emotional Contagion in a Group With a Leader

Emotional contagion is conceptualized as a circular process that can spread like a disease. Unfortunately, this translates into a system with runaway behavior. To address this shortcoming, a computational model was created to represent emotional contagion within a system of controlling processes. Simulations of the model confirmed the viability of the theory rather than runaway behavior.

Job Crafting: A Refinement in Conceptualization and Measurement
This study addresses conceptual and measurement issues related the job crafting framework of Tims, Bakker, and Derks (2012). We show that the Tims et al. decreasing hindrance demands subscale is contaminated—it primarily reflects crafting of decreased challenge demands—and a more construct-valid version of the subscale is offered.

How Much Preventative Behaviors Do I Need To Do? The Answer Is Not Intuitive

This study proposes that in order to maintain a low level of adverse outcomes as the likelihood of adverse outcomes increases, a sharp nonlinear increase in preventative behavior is necessary. It is also argued that this pattern of behavior is not intuitive. Individuals' tendency to rely on intuition predicted the degree to which their behavior resembled this nonlinear pattern.

Personnel Changes in Teams: Effects on Leaders' and Subordinates' Workload and Health

This study investigates the relationship of personnel changes with workload and health impairment in a 2-wave study with a sample of 402 individuals, nested in 83 teams. Both joining and leaving team members lead to changes in workload and health. Additionally, being a leader or subordinate moderated the relationship of personnel changes with workload and health impairment.

On the Move: Do Employees Change Jobs More Frequently Today Than in the Past?

The literature suggests that Millennials are "job hopping" more than previous employees. This descriptive study explores historical patterns of job change using 2 samples from National Longitudinal Surveys of Youth. Preliminary findings suggest that common assumption may not be entirely accurate, but this inaccuracy has more to do with preconceptions of previous generations' work experiences.

Can an assessment game
measure *g* as well as
a traditional assessment?

THE ANSWER IS YES.

Two independent studies have confirmed our
own rigorous validation:

Revelian's assessment games
measure *g* as well as, or better
than, many standalone
cognitive ability tests.

And what's more,
candidates love doing them!

Find out more about Cognify and Theme Park Hero
and request a complimentary trial at Booth 713.

www.revelian.com/cognify | www.revelian.com/theme-park-hero

More than ever it's
critical
for organizations to
know
why employees
choose
to stay or leave.

With unemployment at its lowest level in decades, using **Stay Interviews** and **Exit Interviews** to gain real insight into how employees view their jobs and their company is a best practice. When companies have reliable and sound information on workplace expectations and experiences, they can truly make informed decisions on what can and should be done to improve retention.

Exit Interviews are a relatively inexpensive investment with high **ROI**. On average, the cost of a full year of exit interviews is typically paid by a decrease in turnover of only one employee.

Let Burke help you create customized stay and exit interview programs to further drive employee retention, engagement, and ultimately, business results.

Are They Lying? Predictors, Measures, and Outcomes of Applicant Faking in Interviews

This symposium advances our knowledge about applicant faking in interviews. It includes 5 studies examining individual differences associated with faking, situations in which applicants fake (more), how unreliable interviewers are at spotting faking, and how faking can impact both interviewers' judgments and workplace outcomes. In short: There is still work ahead to deal with interview faking.

299. Panel Discussion: 8:00AM–9:20AM Sheraton 1 Built to Last: Innovations in Large-Scale Leadership Assessment and Development

Building leadership assessment and development programs that have longevity, scale, and impact presents a tremendous challenge in increasingly VUCA business environments. In this session, panelists will share their innovative approaches to addressing these challenges and creating programs that are built to last. Successes, failures, innovations, and lessons learned will be highlighted throughout.

300. Symposium/Forum: 8:00AM–9:20AM Sheraton 2 Using Natural Language Processing to Measure Psychological Constructs

Natural language processing (NLP) is a family of data science techniques used to extract meaning from text. I-Os are using NLP in a

variety of contexts. This session joins academics and practitioners in the assessment context to discuss what constructs can be measured with NLP, how/why these constructs can be measured, and the pros/cons of using them versus traditional measurements.

Tackling the Succession Dilemma: Come Use Design

Thinking to Crack the Code (Part 1)

Organizations often struggle with effective succession planning to build strong leadership pipelines. Through an interactive workshop and 2-part format, this first session introduces design thinking as a new problem-solving strategy. Participants will build design thinking capabilities and use them to generate innovative solutions to succession planning that can be applied in organizations.

Due for an Upgrade? The Future of I-O Psychology and HR in the Digital Era

In response to the rapid acceleration of globalization and technology, organizations today are recognizing the need to “go digital.” I-O and HR have the opportunity to play an even greater strategic role in the new digital era by influencing how people, systems, and jobs are leveraged to meet these demands. This session will explore challenges and opportunities facing the field in the digital era.

Advancements in Impression Management Research

Individuals' level of success at securing important work outcomes is partly driven by their ability/willingness to impression manage. For organizations, impression management is concerning in that the most qualified candidates or employees are not necessarily the ones most capable of making a good impression on decision makers. The symposium is intended to further advance research in this area.

Getting Started With Bayesian Statistics in I-O Research

This tutorial provides participants with an approachable introduction to key Bayesian concepts and their application to I-O research. Attendees will learn about the benefits of Bayesian statistics, compared to traditional methods, and become familiar with commonly used Bayesian metrics and tools. Hands-on activities will provide participants experience interpreting and communicating results.

Where Do We Stand? Alternative Methods of Ranking I-O Graduate Programs

In July 2016, a Call for Proposals was issued seeking proposals for new and unique methodologies for ranking I-O PhD and MA/MS programs that reflect the diversity of values and strengths across the field. Five proposals for alternative I-O program rankings have been accepted. In this session, each project team will discuss its findings. Then, a panel will discuss the implications of the findings.

427. Friday Seminar: 11:30AM–2:30PM Huron
Friday Seminar 3: Tools or Toys? Evaluating New Approaches to Prehire Assessment
PREREGISTRATION AND ADDITIONAL FEE REQUIRED.

New approaches to online assessment challenge the familiar text-based multiple-choice format with methods that incorporate gaming, video, AI, and so on. Do the approaches fulfill a promise of improving utility, efficiency, and candidate experience? This seminar provides an overview, demonstration, and critical analysis of methods from a test user's POV.

428. Symposium/Forum: 11:30AM–12:50PM Michigan A
New Insights and Solutions to Workplace Mistreatment

Research on workplace mistreatment has exploded over the past decade, but many questions remain unanswered. This symposium introduces fresh perspectives on mistreatment constructs, consequences, explanatory factors, and strategies for reduction and remediation. It will conclude with an innovative brainstorming session, structured to stimulate novel ideas for translating science into practice.

Novel Perspectives on Stigma Identity Management in the Workplace

Scholarship on workforce diversity has recognized the importance of building understanding of the ways in which employees manage stigmatized identities at work. This symposium builds on foundational work on identity management that has focused mostly on sexual orientation minorities by examining these processes in important yet previously understudied groups.

440. Poster: 12:00PM–12:50PM Riverwalk Personality and Job Search Behaviors: A Context-Based Meta-Analytic Review

Relations among personality traits, job search behaviors, and the impact of context moderators on these relations were evaluated through a meta-analysis. A review of 53 articles ($N = 22,365$) revealed smaller effect sizes than previously reported, regardless of the type of job search behavior. Job search context was found to moderate personality–job search relations.

443. Poster: 12:00PM–12:50PM Riverwalk Exit, Voice, and Loyalty Among Women Faculty

Voice represents employee opportunities to influence the decision-making process (Farndale, Van Ruiten, Kelliher, & Hope-Hailey, 2011; Folger, 1977). Authors proposed and tested a conditional process model in which voice has both direct and indirect effects on affective commitment through procedural justice, and gender moderates all paths. Evidence was found for a conditional, indirect effect.

444. Poster: 12:00PM–12:50PM Riverwalk Dominance Versus Mastery: Agentic and Communal Goals Across Two Cultures

Authors assessed the factor structure of Diekmann et al.'s (2010) measure of communal and agency goals among Americans (Study 1) and Israeli women (Study 2). Results indicated that the measure assesses communal, mastery, and dominance goals. Communal and dominance goals related to gender and perceived fit in organizations described as affording these goals. Cross-cultural differences also emerged.

Core Self-Evaluations as a Source of Inaccuracy in Job Analysis Ratings

This study finds that core self-evaluation exerts a biasing effect on job analysis ratings, resulting in higher ratings and less discrimination among job components. To encourage theory building, results are framed in the context of 2 personality-based theories: trait activation theory and the theory of purposeful work behavior. Practical implications for practitioners are provided.

Comparing Personality Factors and Facets to Predict Workplace Driving Accidents

Work examining personality factors and accidents has yielded inconclusive results, but evidence suggests that higher order factors are less accurate predictors. Three studies compare the efficacy of higher order personality factors and lower order facets with accident involvement in truck drivers and find that personality facets predict substantially more variance than personality factors.

Positive Work–Life Outcomes: Leveraging Self-Compassion and Balance

In line with the conservation of resources theory, findings from 135 working professionals indicate self-compassion is associated with increases in work–life balance, life satisfaction, and job satisfaction, and reductions in burnout at work and home. Work–life balance also plays a mediating role between self-compassion and the examined outcomes. Implications are discussed.

The Impact of High-Performance Work Practices on Project Success

This study examines the direct and indirect effects of high-performance work practices (HPWPs) on project efficiency and effectiveness, mediated by behavioral engagement. Findings show that specific HPWPs predict efficiency and effectiveness outcomes and that behavioral engagement mediates some of these relationships. Implications for project management research and practice are discussed.

Employee Retribution: When Work–Family Boundaries Go Awry

This poster investigated work interference with family (WIF) as a full mediator between segmentation/integration value congruence and unethical work behavior (UWB) intentions. Also explored was whether conscientiousness moderated the WIF–UWB intentions relationship. Findings revealed that low-conscientious employees experiencing higher levels of WIF showed greater intentions to engage in UWB.

An Experimental Investigation of the Effect of Cubicles on Perseverance

Previous studies have examined the effect of cubicles on task performance in open plan offices. However, it is unclear to what extent the observed effects are due to the presence of others or to the design itself.

Two experiments are presented that show that when a worker is alone in a large room, a cubicle partition can increase perseverance in difficult tasks.

**534. Poster: 3:00PM–3:50PM****Riverwalk****The Role of Off-Task Thoughts and Behaviors in Linking Self-Control With Outcomes**

Research has shown that self-control is linked to a variety of valued outcomes, but little is known about the day-to-day behaviors and experiences responsible for these links. This study examined off-task thoughts and behaviors as potential mediators. Results supported the role of these thoughts and behaviors in relationships with task completion, grade point average, and affect.

536. Poster: 3:00PM–3:50PM**Riverwalk****State and Trait Affect in Self-Regulation**

This study found that trait negative affect moderated the effect of performance feedback on state affect, as well as the effect of state affect on subsequent effort. State anger yielded a positive relationship with effort at low levels of NA but a null relationship at high levels of NA. Contrary to hypotheses, self-efficacy did not mediate the relationship between state affect and effort.

Does Money Buy Engagement? Learning From the World's Most Admired Companies

Employee engagement continuously represents a top talent management priority. Organizations, however, have received inconsistent messages about the impact of financial reward on employee engagement. This session invite reward specialists to discuss how reward systems can be designed and executed to foster and harness employee motivation for improved engagement.

Diverse Approaches to Diversity: What Can I-O Learn From and Share With Other Fields?

MultiDisciplinary

This panel addresses what I-O psychology can learn about diversity and inclusion from other fields and what I-O can share with them. Panelists come from employment economics, D&I and HR, labor and industrial relations, and I-O psychology with research, authorship, consulting, and practice experience. Employer and SHRM perspectives and audience input will be included.

How will you build the leadership capabilities needed for the digital, transformative era?

Disruptions of every kind are transforming our businesses. There is an upside to disruption, and prepared leaders know how to find it. Organizations with leaders prepared to pioneer in the digital-era are more ready to take advantage of disruption, outperforming organizations lagging in modern leadership capabilities. EY helps accelerate modernization of leadership capabilities needed for success in this transformative, digital era.

The better the question. The better the answer.
The better the world works.

AMERICAN INSTITUTES FOR RESEARCH®

The American Institutes for Research (AIR) has been at the forefront of applied research to improve the performance of individuals and organizations. AIR, a not-for-profit organization, has focused on this critical need for more than 70 years since our founder, John Flanagan, began developing combat pilot selection procedures to identify candidates who were best suited for these high-stress jobs.

Through innovative research and the application of evidence-based practices, AIR's Workforce Solutions group supports the development of high performing individuals, teams, and organizations. Our work encompasses the entire employment life cycle—workforce preparedness, recruitment, selection, performance management, training, retention, and more—and provides our public and private sector clients with unique insight and solutions. Our experts apply research-based principles in developing the knowledge, tools, systems, and programs required for maximizing human and organizational potential in the 21st century.

Our recent accomplishments include important work in the following areas:

- **Job analysis**
- **Competency modeling**
- **Selection**
- **Performance management**
- **Training**
- **Workforce development**
- **Organizational effectiveness**
- **Human factors and usability testing**
- **Program evaluation**

We are seeking Master's and Ph.D. I/O Psychologists for current openings. AIR offers an excellent compensation and benefits package, including a fully-funded retirement plan, generous paid time off, tuition assistance, and more.

An equal opportunity employer.

Employee engagement
matters.
...and **retaining**
peak performers is key.

Employee turnover is costly for companies through not only lost productivity, but with added recruiting, hiring, onboarding and retraining costs. Beyond direct replacement costs, valued employees leave with company insights and customer relationships that are often difficult to replace.

Understanding **WHY** employees leave can lead to improving **WHY** they stay. Conducting exit interviews in an objective, confidential manner – online or by phone – ensures optimal information sharing and learning. A third party option provides a neutral outlet for employees to be completely open and honest with responses.

Let Burke help you create a customized **Exit Interview** program to further drive employee retention, engagement, and ultimately, business results.

643. Symposium/Forum: 8:00AM–9:20AM Sheraton 2**The Creative Process in Context: Contextual Influences on the Creative Process**

The papers in the proposed symposium illuminate how contextual variables (i.e., teams, goals, social networks, time pressure) may influence the creative process. Together, these papers illustrate that context influences the creative process in complex ways. Moreover, each of these papers contributes to the extant research on the relationship between the creative process and creative outcomes.

644. Symposium/Forum: 8:00AM–9:20AM Sheraton 3**Decision-Aid Aversion in Employee Selection**

Employee selection decision-aids can enhance the quality of hiring decisions and improve organizational outcomes. Yet, these decision-aids are often overlooked in favor of subjective methods of assessment. This symposium integrates research from human judgment, rationality, and behavioral economics to shed light on the psychology behind the use and non-use of decision-aids in employee selection.

The Attenuating Effect of Mastery Goal Orientation on IVT's Impact on Silence

This research tests the effects of employees' implicit voice theories on silence and investigates mastery goal orientation as a potential moderator of this relationship. Consistent with prior research, results indicate that employees with strong IVT beliefs do engage in more silence behaviors. However, it is found that for individuals with a mastery goal orientation, this effect is mitigated.

Do Creative Employees Engage in More Citizenship Behaviors?

This study hypothesized a relationship between creativity and organizational citizenship behavior (OCB). Consistent with predictions, creativity was positively related to OCB where the more creative an individual is, the more they engaged in OCB, especially change-oriented OCB. However, when the workplace is fraught with constraints and barriers, the creativity–OCB relationship decreases.

691. Symposium/Forum: 10:00AM–11:20AM**Chicago 7****Organizations' Signals of Identity Safety Versus Threat for Underrepresented Groups**

Underrepresented group members are vigilant to cues that convey that their social identities are valued (identity safety) or devalued (identity threat) in a given context. This symposium identifies factors that signal safety versus threat and mechanisms through which these cues operate. Specific strategies organizations can use to promote diversity and inclusion via safety signals are provided.

Implications of Curvilinear Relationships in Personality Assessment

Recent research has provided empirical support for curvilinear relationships in personality assessment. However, mixed findings make it difficult for researchers to generalize findings and for practitioners to apply curvilinear concepts. Researchers and practitioners discuss theoretical and practical implications of leveraging curvilinear relationships in a scientist–practitioner framework.

734. Poster: 10:00AM–10:50AM**Riverwalk****Ethical Leadership and Knowledge Sharing: A Moderated Mediation Model**

This research examines how ethical leadership is related to knowledge sharing. Based on social cognitive theory, it is proposed that ethical leadership positively influences subordinates' knowledge sharing by enhancing subordinates' general self-efficacy. Drawing on conservation of resource and burnout theory, authors argue that such effects largely depend on subordinates' emotional exhaustion.

736. Poster: 10:00AM–10:50AM**Riverwalk****Conceptualization and Implications of Leader Perceived Network Structure**

Leaders develop a cognitive map of the interpersonal connections in their teams. This cognitive map, conceptualized as leader perceived network structure (LPNS), captures the interpersonal ties among employees based on their leaders' subjective perception. LPNS has important applications on leadership behaviors and employee and team outcomes.

This study examines the effects of perceived political alignment (PPA) with one's leader on job satisfaction and stress. PPA was positively related to job satisfaction and negatively related to stress. Moderated-mediation shows these relationships are mediated by LMX and hold despite variations in general interest in politics, tolerance for opposing political views, or company disclosure policies.

777. Poster: 11:30AM–12:20PM**Riverwalk****Ambivalent Supervision: Negative Outcomes and Cross-Domain Buffers**

This study investigated ambivalent supervision, a supervisory relationship with highly positive and negative interactions, resulting in employee uncertainty. Ambivalent supervision was related to affective organizational commitment, stress, and employee trust of their supervisor. In addition, there was some evidence for peer support as a buffer of ambivalent supervision's negative effects.

A must read in today's war for talent.

A product provided by EASI•Consult, Columbia University, and Hogan Assessments

It took years of research for the *Burke Learning Agility Inventory™* to emerge.

Now that learning agility can be measured, organizations can develop it. This book is the "how to" for practitioners and scholars.

Gary Latham, *University of Toronto*

What is learning agility? Surprisingly, it may be the single biggest determinant of career success. This is the first book to really explain the why, what, and how of learning agility. If you're looking for a competitive advantage, read this book.

Alan Church, *PepsiCo*

Learning agility is critical for today's leaders. This book is an authoritative volume on understanding learning agility in the workplace. A must-read for anyone interested in gaining real expertise on this topic.

Order now at www.LearningAgilityBook.com

896. Poster: 1:30PM–2:20PM**Riverwalk****Team Creativity Suffers When the Critical Member Is in Conflicts**

It was found that a critical member's (i.e., member with the highest centrality in the workflow network) task conflict with other members interact with team shared goal to predict team task reflexivity, which leads to team creativity. Moreover, the indirect effect of a critical member's task conflict on team creativity through task reflexivity was only positive when the team has a shared goal.

898. Poster: 1:30PM–2:20PM**Riverwalk****Organizational Citizenship Behaviors and Conflict: Distinguished at the Team Level**

This study examines the similarity between organizational citizenship behaviors (OCB) and conflict at the individual and team levels. Aggregated to the team level, OCB lose theoretical distinction from conflict. Findings from regression and confirmatory factor analyses suggest that, although these constructs are similar, they are empirically different at both levels of analysis.

900. Poster: 1:30PM–2:20PM**Riverwalk****Not in Sync, But We Think We Are: Actual Versus Perceived Temporal Team Mental Models**

This study expands the nascent research on temporal team mental models (TMM) by examining the relationship between perceived and actual temporal TMM similarity on team viability and performance. Results revealed that mismatches between actual and perceived TMM similarity were particularly detrimental to these outcomes. When teams think they are in-sync but are actually not, performance declined.

Working Alone and Together: Understanding the Factors That Affect Work Transitions

The authors extend teams research, studying how individuals manage recurring task transitions. Leveraging the notion of task “stickiness” from human factors, they explore the relative stickiness of work conducted alone versus together using a sample from NASA's HERA analog. Collective tasks tend to be rated as more difficult, interesting, and important, and thus stickier than individual tasks.
